Pirani Standard Gauge PVG-500 PVG-502 Quick Reference Card

Pirani Standard Gauge

PVG-500 PVG-502

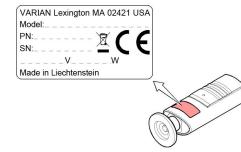

Operating Manual Incl. EC Declaration of Conformity

tqna69e1 2 (2012-03)

Product Identification

In all communications with Agilent, please specify the information on the product nameplate. For convenient reference copy that information into the space provided below.

Validity

This document applies to products with the following part numbers:

W filament

PVG500KF16 (DN 16 ISO-KF, w/o switching functions) PVG500KF16S (DN 16 ISO-KF, with switching functions) PVG500CF16 (DN 16 CF-R, w/o switching functions) PVG500CF16S (DN 16 CF-R, with switching functions)

Ni filament

PVG502KF16S (DN 16 ISO-KF, with switching functions) PVG502CF16S (DN 16 CF-R, with switching functions)

The part number (PN) can be taken from the product name-

We reserve the right to make technical changes without prior notice.

All dimensions in mm

Intended Use

The Pirani Standard Gauges PVG-500 and PVG-502 have been designed for vacuum measurement of gases in the pressure range of 5×10⁻⁴ ... 1000 mbar.

They must not be used for measuring flammable or combustible gases in mixtures containing oxidants (e.g. atmospheric oxygen) within the explosion range

They can be operated in connection with an Agilent controller or with another controller

Safety

Symbols Used

Information on preventing any kind of physical injury.

! WARNING

Information on preventing extensive equipment and environmental damage

! Caution

Information on correct handling or use. Disregard can lead to malfunctions or minor equipment damage

Personnel Qualifications

Skilled personnel

All work described in this document may only be carried out by persons who have suitable technical training and the necessary experience or who have been instructed by the end-user of the product.

General Safety Instructions

- Adhere to the applicable regulations and take the necessary precautions for the process media used. Consider possible reactions between the materials and the process media.
- Consider possible reactions (e.g. explosion) of the process media due to the heat generated by the product.
- Adhere to the applicable regulations and take the necessary precautions for all work you are going to do and consider the safety instructions in this document
- · Before beginning to work, find out whether any vacuum components are contaminated. Adhere to the relevant regulations and take the necessary precautions when hand-

Communicate the safety instructions to all other users

Liability and Warranty

Agilent assumes no liability and the warranty becomes null and void if the end-user or third parties

- disregard the information in this document
- · use the product in a non-conforming manner
- make any kind of interventions (modifications, alterations etc.) on the product
- · use the product with accessories not listed in the product

The end-user assumes the responsibility in conjunction with the process media used.

Gauge failures due to contamination or wear and tear as well as expendable parts (e.g. filament), are not covered by

! Caution

When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.

! Caution

Caution: dirt sensitive area Touching the product or parts thereof with bare hands increases the desorption rate

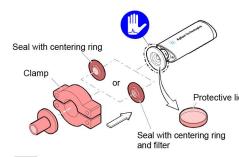

Always wear clean, lint-free gloves and use clean tools when working in this area.

p_{eff} (mbar)

The gauge may be mounted in any orientation. To keep condensates and particles from getting into the measuring chamber preferably choose a horizontal to upright position and possibly use a seal with a centering ring and filter. If adjustment should be possible after the gauge has been installed, be sure to install it so that the button can be accessed with a pin (→ "Adjusting the Gauge").

Remove the protective lid and install the product to the vacuum system.

Keep the protective lid

Installation

Vacuum Connection

(STOP) DANGER

(STOP) DANGER

DANGER: overpressure in the vacuum system >2.5 bar

DANGER: overpressure in the vacuum system

caused by escaping process gases can result if

clamps are opened while the vacuum system is

Do not open any clamps while the vacuum sys-

tem is pressurized. Use the type of clamps which

Injury caused by released parts and harm

KF connections with elastomer seals (e.g. O-rings) cannot withstand such pressures. Process media can thus leak and possibly damage

Use O-rings provided with an outer centering

STOP DANGER

DANGER: protective ground

Incorrectly grounded products can be extremely hazardous in the event of a fault

The gauge must be electrically connected to the grounded vacuum chamber. This connection must conform to the requirements of a protective connection according to EN 61010

- CF connections fulfill this requirement
- · For gauges with a KF connection, use a conductive metallic clamping ring.

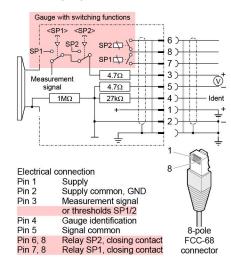

Power Connection

Make sure the vacuum connection is properly made → "Vacuum Connection").

If no sensor cable is available, make one according to the following diagram.

Connect the sensor cable to the gauge and the control-

Operation

When the supply voltage is applied, the measurement signal is available between pins 3 and 5 (relationship between measurement signal and pressure → "Technical Data").

Allow a stabilization period of at least 10 minutes. It is advisable to operate the gauge continuously, irrespective of the

Gas Type Dependence

The measurement value is gas dependent. The pressure reading applies to dry air, O₂, CO and N₂. For other gases, it has to be corrected (\rightarrow "Technical Data").

If the gauge is operated with an Agilent controller, a calibration factor for correction of the actual reading can be applied ($\rightarrow \square$) of the corresponding controller).

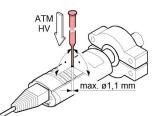

Adjusting the Gauge

The gauge is factory calibrated. Due to long time operation or contamination, a zero drift could occur. Periodically check the zero and adjust it if necessary.

For adjusting the zero, operate the gauge under the same ambient conditions and in the same mounting orientation as

The gauge is adjusted to default values. However, it can also be adjusted to other pressure values, if the exact pressure value is known (reference measurement).

- If you are using a seal with centering ring and filter, check that they are clean or replace them if necessary (→ "Deinstallation").
- 2 Activate the gauge and operate it at atmospheric pressure for at least 10 minutes.
- Press the button with a pin (max. ø1.1 mm) and the ATM adjustment is carried out: The gauge is adjusted to 1000 mbar (10 VDC) by default. By pressing the button >5 s the pressure value is increased towards 1200 mbar (or, by pressing it again, decreased towards 500 mbar) until the button is released or the limit is

- Evacuate to p $\ll 10^{-4}$ mbar (recommended) or to a pressure in the range of 10⁻⁴ ... 10⁻² mbar and wait at
- Press the button with a pin and the HV adjustment is carried out: The gauge is adjusted to 1.2×10⁻⁴ mbar (1.1 VDC) by default. By pressing the button >5 s the pressure value is increased toward 1×10⁻² mbar until the button is released or the limit is reached

Switching Functions

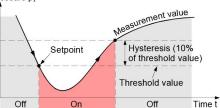

The setpoints are adjustable within a pressure range of $2\times10^3\dots500$ mbar (voltage range of $2.67\dots9.61$ VDC). Each switching function provides a floating relay contact (→ "Electrical Connection").

The status of the switching function is indicated by a LED.

Status	LED	Relay
off	off	deenergized
on	lit	energized

Measurement signal (Pressure p)

Adjusting the Setpoints

DANGER: malfunction

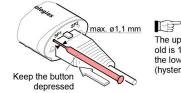

If processes are controlled via the signal output, keep in mind that by pressing a button <SP> the measururement signal is suppressed and that the corresponding threshold value is output instead. This can cause malfunctions

Press a button <SP> only if you are sure that no damages can arise from a malfunction

The status of the relay and LED is not affected by pressing the button.

Press the button <SP1> with a pin (max. ø1.1 mm): The gauge changes to the switching function mode and outputs the current lower threshold value at the measurement value output for about 5 s. When the button is kept depressed for more than 5 s, the threshold setting is modified until the button is released or until the limit of the setting range is reached

The upper thresh the lower one (hysteresis).

When the button is pressed again within 5 s the threshold setting is adjusted in the reverse direction

3 Release the button. The gauge resumes operation after 5 s and the connected controller displays the current measurement value.

The adjustment procedure for <SP2> is the same as described for <SP1>

Deinstallation

and environment.

DANGER: contaminated parts Contaminated parts can be detrimental to health

Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts

! Caution

Caution: vacuum component Dirt and damages impair the function of the vac-

uum component. When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.

! Caution

Caution: dirt sensitive area Touching the product or parts thereof with bare hands increases the desorption rate Always wear clean, lint-free gloves and use

clean tools when working in this area

- Vent the vacuum system.
- 2 Put the gauge out of operation.
- 3 Unplug the sensor cable
- Remove the gauge from the vacuum system and install the protective lid.

Maintenance, Repair

In case of severe contamination or a malfunction, the sensor

Gauge failures due to contamination or wear and tear, as well as expendable parts (e.g. filament), are not covered by the warranty.

Agilent assumes no liability and the warranty becomes null and void if any repair work is carried out by the end-user or third parties.

Spare Parts

When ordering spare parts, always indicate:

- all information on the product nameplate
- · description and ordering number according to the spare

Returning the Product

MARNING WARNING

WARNING: forwarding contaminated products Contaminated products (e.g. radioactive, toxic,

caustic or microbiological hazard) can be detrimental to health and environment.

Products returned to Agilent should preferably

be free of harmful substances. Adhere to the for-

warding regulations of all involved countries and

forwarding companies and enclose a duly completed declaration of contamination

Products that are not clearly declared as "free of harmful

Products not accompanied by a duly completed declaration

substances" are decontaminated at the expense of the

Disposal

STOP DANGER

DANGER: contaminated parts

Contaminated parts can be detrimental to health and environment.

Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

detrimental to the environmen

WARNING: substances detrimental to the environment

Products or parts thereof (mechanical and electric components, operating fluids etc.) can be

Dispose of such substances in accordance with the relevant local regulations.

Separating the components

After disassembling the product, separate its components according to the following criteria

- · Contaminated components
- Contaminated components (radioactive, toxic, caustic, or biological hazard etc.) must be decontaminated in accordance with the relevant national regulations, separated according to their materials, and disposed of
- Other components
- Such components must be separated according to their materials and recycled.

EC Declaration of Conformity

We, Agilent, hereby declare that the equipment mentioned below complies with the provisions of the Directive relating to electromagnetic compatibility 2004/108/EC
