

# AVF Platinum Vacuum Fluid

## Product Description

AVF Platinum is formulated using premium polyalphaolefin (PAO) synthetic base fluid, coupled with an unparalleled high performance additive package.

This vacuum pump lubricant features superior thermal and oxidation stability enabling it to operate over a wide range of temperatures without coking, deposit formation, or corrosion. The lubricant has low volatility and compatibility with mineral oil lubricants.

Corrosion protection, low pour point and excellent oxidative stability ensure that the use of this lubricant over a wide range of applications and systems will result in a long, trouble-free and uninterrupted service interval.

AVF Platinum is specifically advantageous in pump operating within harsh chemical environments, particularly with sour gas (hydrogen sulphide present) applications, due to their robustness of formulation and cleanliness of operation.

## Product Applications

Mass Spectrometry Superior Grade Mechanical Vacuum Fluid

### Features

- Corrosion protection (H<sub>2</sub>S)
- Excellent lubricity
- Low pour point with high viscosity index
- Oxidatively stable
- Low volatility

### Benefits

- Resistance against H<sub>2</sub>S corrosion
- Increased efficiency, reduced cost of operation
- Better oil flow at start-up / Widest operating temperature range
- Longer oil life / Reduced maintenance
- Reduced maintenance, reduced top-up

## Health and Safety

Based on available information, AVF Platinum is a non-toxic, non-hazardous product that is not expected to cause any adverse effects when used as designed. User are advised to follow the recommendation provided in the SDS.

# AVF Platinum Vacuum Fluid

## Physical Properties

| Criteria                            | Value        | Method |
|-------------------------------------|--------------|--------|
| ISO VG                              | 68           |        |
| Density, g/mL @ 20.0°C              | 0.835        | D4052  |
| Water Content, ppm                  | 53           | D6304  |
| Total Acid Number, mg KOH/g         | 0.05         | D974   |
| Flash and Fire Point                |              | D92    |
| Flash Point °C                      | 268          |        |
| Fire Point °C                       | 298          |        |
| Kinematic Viscosity, cSt            |              | D445   |
| 40°C                                | 68.1         |        |
| 100°C                               | 10.4         |        |
| Viscosity Index                     | 139          | D2270  |
| Pour Point, °C                      | -51          | D97    |
| Foaming Tendency, mL                |              | D892   |
| Sequence I                          | 10/0         |        |
| Sequence II                         | 20/0         |        |
| Sequence III                        | 0/0          |        |
| Demulsibility                       |              | D1401  |
| Water - Oil - Emulsion (Time, mins) | 38-40-2 (15) |        |
| Noack Volatility, % Loss            | 1.3          | D972   |
| Copper Strip Corrosion              |              | D130   |
| 100 °C for 3 hours                  | 1B           |        |
